

The Perfect Solution for Listed Buildings!

A world class property in one of the most sought after locations in London, this loving refurbishment manages to pull off several amazing feats.

Not only does it meet and enrich its' grade 1 listed status, but it also discretely encompasses the very latest AV delivery technology, intertwining it with the heritage features to create an environment that is truly outstanding and in keeping with the owner's love of fine quality in all things.

A Whole House Solution

Amina Invisible speakers were used throughout the property with the most challenging areas being the dining room and the conservatory for different reasons.

The original plans were to install traditional loudspeakers recessed into the dining room ceiling. This was vetoed immediately by local planning and conservation officers. The solution was to install two AIW5X speakers into a suspended ceiling, the finishing wow factor was provided by gilding over the skimmed plaster surface.

The conservatory provided a challenge of its own with its glass walls and roof providing a light, airy and acoustically harsh environment. The incredibly thin profile thin of the Amina vibrational soundboard speakers meant that with a simple plinth erected across the door lintel the speakers could be hidden anonymously within.

Here again the Amina's audio delivery technology paid other dividends. As the sound waves in the speaker evolve in all directions - a hemispherical wave - the sound sweeps through the entire space and into tight corners to give a more even, ambient coverage.

And because the wave from a vibrational surface is complex and defuse, just like a piano, the product is ideal for "acoustically reflective environments" i.e. rooms full of hard surfaces. The reflections quite literally sum with the original wave enhancing the all encompassing experience.

This whole complex is a subtle intertwining of cutting edge AV, superior craftsmanship and the owner's vision to create a home of outstanding beauty and functionality. It also is a living example of how to sympathetically refurbish a historic grade 1 listed building with the latest technology and lose neither identity in the process.
